1. Getting Started

Welcome to UnicornDS — the all-in-one Chrome extension for eBay sellers. This handbook covers every feature in the extension, from signup to advanced tools.

1.1 Create Your Account

1. Go to **unicornds.io/signup**
2. Enter your **full name**, **email**, and **password**
3. Optionally add your **phone number** and **country**
4. Click **Sign Up** — your 14-day free trial starts immediately

Your trial includes 100 listings, AI titles, Product Hunter, Competitor Scanner (3/day), Stock Checker (10/day), and VERO protection.

1.2 Download & Install the Extension

1. Log in at **unicornds.io/login**
2. Go to **unicornds.io/download**
3. Click **"Download UnicornDS"** — a ZIP file downloads
4. **Unzip** the file (double-click on Mac, right-click > Extract All on Windows)
5. Open Chrome and type **chrome://extensions** in the address bar
6. Toggle ON **"Developer mode"** (top-right corner)
7. Click **"Load unpacked"** and select the unzipped UnicornDS folder
8. The UnicornDS icon appears in your toolbar — you're ready!

Tip: Works on Chrome, Edge, Brave, Opera, and any Chromium-based browser.

1.3 Log In to the Extension

Click the UnicornDS icon in your browser toolbar. Enter the same email and password you used on the website. You'll see the Listing tab with your plan details.

1.4 Forgot Your Password?

If you forget your password, here's how to reset it:

1. Go to **unicornds.io/login**
2. Type your **email address** in the email field
3. Click **"Forgot password?"** below the login button
4. Check your email inbox for a password reset link from Firebase
5. Click the link, set a new password, then log in again

Note: The reset email comes from **noreply@unicorn-ds-7f831.firebaseio.com**. Check your spam folder if you don't see it within a minute.

2. The Popup — Your Control Panel

Click the UnicornDS icon in your toolbar to open the popup. It has four tabs:

2.1 Listing Tab

This is the main tab. When you're on an AliExpress or Amazon product page, it shows the product title and ID, cost price and suggested eBay sell price (with profit breakdown), "Scrape This Product" button, and VERO/New Product status badges. The green "Not VERO" badge means the product is safe to list. If it shows "VERO BLOCKED", do not list it.

2.2 Tools Tab

All your tools in one place:

Product Hunter — Search Amazon for products by keyword. Filter by price, reviews, VERO.

Competitor Scanner — Enter any eBay seller's username to extract their entire catalog.

Order Manager — View and manage your eBay orders.

Fast Tracker — Track views, watchers, and sales on your active listings.

Bulk Lister — Paste multiple product links and list them all automatically.

Image Template Designer — Create branded image templates with watermarks and overlays.

AI Title Builder — Generate 3 SEO-optimised eBay titles using GPT-4o.

Download Active Listings CSV — Export all your eBay listings to a spreadsheet.

Upload Listings CSV — Import listings from a CSV file.

Send Offers to Watchers — Send promotional offers to people watching your items.

Review Pending Offers — Review and accept/decline buyer offers.

Duplicate SKU Checker — Find duplicate product IDs in your listings.

Message Templates — Pre-written customer message templates.

Address Helper — Copy buyer addresses from eBay and paste to AliExpress checkout.

2.3 Bulk Tab

Quick access to open the Bulk Lister in a full page. Paste Amazon or AliExpress product links and list them all on eBay automatically.

2.4 Settings Tab

Configure your pricing and listing preferences. Settings are split by source (AliExpress vs Amazon) so you can use different profit margins for each. Key settings include Profit % (default 50% AliExpress, 25% Amazon), Stock Quantity (how many to list), Promo/Ad Rate (eBay promoted listings fee), Shipping Cost per item, VAT % (if registered), Enable AI toggle, and Auto-approve toggle (auto-clicks "List It" on eBay).

3. Listing a Product from AliExpress

3.1 Navigate to a Product

Go to any AliExpress product page (e.g. aliexpress.com/item/123456.html). The UnicornDS floating button appears on the page showing the product title, AliExpress price, and suggested eBay sell price.

3.2 Scrape the Product

Click **"Scrape This Product"** in the popup or the floating button. UnicornDS extracts the title, all images (filtering out junk/placeholder images), all variant options (sizes, colours, etc.), price and stock status, and product specifications.

3.3 Review & List on eBay

After scraping, click **"List on eBay"**. UnicornDS opens the eBay listing form and automatically fills the AI-generated title (80 chars, SEO-optimised), uploads all images (up to 24), sets price with your profit margin, selects the correct category, fills all item specifics using AI, writes the product description, and sets condition to New. If Auto-approve is ON, it clicks "List It" automatically.

3.4 Variant (MSKU) Listings

If the product has variants (e.g. multiple sizes), UnicornDS creates a Multi-SKU listing. Each variant gets its own price (calculated with .99 rounding), its own photo, and its own SKU (e.g. UDS-AE-123456_V1, UDS-AE-123456_V2).

Tip: Variant prices automatically end in .99 when you have "Round prices" enabled in Settings. A £6.86 variant becomes £6.99.

4. Listing a Product from Amazon

4.1 Navigate to a Product

Go to any Amazon product page. The UnicornDS panel appears showing the product details, cost price, and suggested eBay sell price with profit breakdown.

4.2 List on eBay

Click **"List on eBay"**. The process is identical to AliExpress listing — AI title, images, category, specs, and pricing are all automated.

4.3 Check on eBay Button

Before listing, use the **"Check on eBay"** button on any Amazon product page. It searches eBay by EAN/UPC/MPN for exact matches, or by brand + keywords for broader results. This helps you see how many competitors are already selling the same item and at what price.

Tip: Amazon products use separate pricing settings. Default is 25% profit (vs 50% for AliExpress) because Amazon UK delivery is faster but cost is higher.

5. Bulk Listing

The Bulk Lister lets you list dozens of products automatically while you do other things.

5.1 Open the Bulk Lister

Go to Popup > Tools > Bulk Lister, or Popup > Bulk tab > Open Bulk Lister.

5.2 Paste Product Links

Paste Amazon or AliExpress product URLs — one per line. You can mix both sources.

5.3 Queue & Process

Click **"Start"**. UnicornDS processes each product: scrapes it, generates an AI title, opens an eBay tab, fills the listing form, and submits. With Growth plan you can run 5 concurrent tabs; Empire runs 10.

5.4 Monitor Progress

The Bulk Lister shows a progress bar with status for each product (queued, processing, listed, failed). If a listing fails, it shows the reason and you can retry.

Warning: Don't close the Bulk Lister tab while it's processing. The extension needs it to coordinate the listing tabs.

6. Product Hunter

6.1 Search by Keyword

Open Product Hunter from Tools tab. Enter a keyword (e.g. "phone case") and select the Amazon marketplace (UK, US, DE, AU). Results show product name, price, reviews, Prime status, and BSR rank.

6.2 Filter Results

Filter by price range, minimum/maximum reviews, VERO status (auto-checked), and Prime eligibility. Products flagged as VERO are highlighted in red — skip these.

6.3 List from Hunter

Click any product to open it on Amazon, then use the normal listing flow. Or select multiple products and send them to the Bulk Lister.

7. Competitor Scanner

7.1 Enter a Seller Username

Open Competitor Scanner from Tools tab. Enter any eBay seller's username (find it on their eBay profile or any of their listings).

7.2 Extract Their Catalog

Click **"Scan"**. UnicornDS extracts all their active listings with titles, prices, images, and sales data. Results are displayed in a table you can sort and filter.

7.3 List Their Products

Find interesting products, then search for the same item on Amazon or AliExpress to source it. Use "Check on eBay" to verify demand before listing.

8. AI Title Builder

8.1 Generate SEO Titles

The AI Title Builder uses GPT-4o to generate 3 different eBay-optimised titles from the product data. Each title is exactly 80 characters (eBay's limit), keyword-rich for search visibility, and free of banned/VERO words.

8.2 Choose & Edit

Pick the title you like best. Click it to select. You can also edit titles manually before listing. Titles are generated during the listing flow automatically — you only need the standalone Title Builder for pre-planning.

9. Image Designer

Create branded product images that stand out from competitors.

9.1 Create Templates

Design image templates with your store branding — logo placement, background colour, border style, and text overlays. Templates are saved and reused across all listings.

9.2 Add Watermarks & Overlays

Add "FREE UK DELIVERY" badges, "30-DAY RETURNS" labels, or your store logo as a watermark. These are automatically applied to all product images during listing.

10. Listing Tracker

10.1 Track Active Listings

Open Fast Tracker from Tools tab. It shows all your active eBay listings with views, watchers, and sales counts. Sort by watchers to find items with high buyer interest.

10.2 Send Offers to Watchers

Use **"Send Offers to Watchers"** from the Tools tab. This sends discount offers to everyone watching your items — a proven way to convert watchers into buyers. Set a discount percentage and UnicornDS sends offers automatically.

11. Address Helper

11.1 Copy Address from eBay

When you receive an order on eBay, the Address Helper auto-captures the buyer's shipping address (name, street, postcode, country, phone). Go to your eBay orders page and click the UnicornDS address capture button.

11.2 Paste to AliExpress

Navigate to AliExpress checkout. Click **"Paste to AliExpress"** in the popup — the buyer's address auto-fills into AliExpress shipping fields. Saves minutes per order. Also works with TikTok Shop and Amazon addresses.

Tip: Address Helper includes duplicate detection — it warns you if the same address was used recently, preventing accidental double orders.

12. Order Manager & Smart Messages

The Order Manager shows your eBay orders with per-order message buttons. Click the message button on any order to auto-copy a friendly delivery template with the buyer's name and your store name pre-filled. Templates differ by source: AliExpress orders say "3-4 working days" while Amazon orders say "1-2 working days".

13. Stock Checker & Restock

On your eBay Active Listings page, UnicornDS adds inline buttons: **"Stock Check"** fetches the source product page and shows whether the item is still in stock. **"Restock"** prompts you for a new quantity and updates the listing. This prevents cancelled orders from out-of-stock items — the #1 cause of eBay account restrictions.

14. Pricing & Profit Settings

14.1 Per-Source Settings

UnicornDS has separate pricing settings for AliExpress and Amazon. This is important because AliExpress has lower cost but longer delivery, while Amazon has higher cost but Prime delivery. Default settings are AliExpress: 50% profit, and Amazon: 25% profit. You can adjust these in Settings tab.

14.2 eBay Fee Calculation

The pricing formula accounts for eBay Final Value Fee (12.8% + £0.30 for UK), Promoted Listings fee (your Ad% setting, default 10%), VAT (if you're registered), and Shipping cost per item. The formula calculates the sell price needed to achieve your desired profit percentage after all fees.

14.3 .99 Price Rounding

Enable **"Round prices to .99"** in Settings to make all prices end in .99 (e.g. £6.86 becomes £6.99, £14.67 becomes £14.99). This looks more professional and is proven to increase sales. Also supports .95 rounding.

15. VERO & Compliance Protection

15.1 VERO Brand Checker

UnicornDS automatically checks every product against 3,390+ VERO-protected brands before listing. If a brand is on the VERO list, you'll see a red "VERO BLOCKED" badge and the product cannot be listed. This prevents account suspensions from intellectual property violations.

15.2 Knives & Weapons Policy

The compliance checker blocks bladed items (knives, chisels, saws, axes, scissors), illegal weapons (crossbows, pepper spray, stun guns), and items requiring age-verified delivery. AliExpress dropshippers cannot comply with age-verification requirements, so these are automatically blocked.

Smart exceptions prevent false positives: "wiper blade" (car part), "blender blade" (appliance), "silicone scraper" (caulking tool), and "ice scraper" (plastic) are all allowed through.

15.3 Product Safety

The checker also blocks baby sleep products (loungers, cot bumpers, sleep positioners), standalone 18650 batteries, high-power laser pointers, and novelty lighters — all banned by eBay's Product Safety Policy.

16. Plans & Billing

	Free Trial	Starter	Growth	Empire
Price	Free (14 days)	£23.99/mo	£47.99/mo	£79.99/mo
Listings	100 total	500/month	1,500/month	3,000/month
AI Titles	Yes	Yes	Yes	Yes
Product Hunter	Unlimited	Unlimited	Unlimited	Unlimited
Competitor Scanner	3/day	5/day	Unlimited	Unlimited
Stock Checker	10/day	20/day	Unlimited	Unlimited
Bulk Lister Tabs	1	1	5	10
Image Designer	No	No	Yes	Yes
Address Helper	No	No	Yes	Yes
MSKU Builder	No	No	No	Yes
VERO Protection	Yes	Yes	Yes	Yes

Note: Empire plan works across multiple eBay accounts — tokens deduct from one shared pool. 7-day money-back guarantee on all plans. Cancel anytime.

17. Troubleshooting & FAQ

Q: The extension shows "Navigate to an AliExpress product page"

A: Make sure you're on an actual product page (URL contains /item/). Category pages and search results don't trigger the scraper.

Q: Listing form fields are empty after filling

A: eBay sometimes reloads the page after saving item specifics. v7.11.2 includes a post-fill retry that re-fills empty required fields automatically.

Q: Variant prices don't end in .99

A: Enable "Round prices to .99" in Settings tab and save. All variant prices will then round to .99 endings.

Q: "VERO BLOCKED" but the product isn't branded

A: Some generic keywords trigger VERO detection. Check the exact brand name flagged. If it's a false positive, you can still list manually on eBay.

Q: Bulk Lister stops mid-way

A: Don't close the Bulk Lister tab. If Chrome goes to sleep, listings pause. Keep Chrome active. v7.11.2 includes crash recovery — the bulk lister signals completion even if a tab closes.

Q: I can't log in to the extension

A: Try logging in on unicornds.io/login first to verify your credentials. Then try the extension. Clear extension data if needed: `chrome://extensions` > UnicornDS > Details > Clear data.

Q: Password reset email not arriving

A: Check your spam/junk folder. The email comes from `noreply@unicorn-ds-7f831.firebaseio.com`. If still nothing, contact support@unicornds.io.

Q: How do I update the extension?

A: When a new version is available, you'll see a gold badge on the extension icon and a purple banner in the popup. Click it to download the latest version from unicornds.io/download.
